

1. Introduction

This Privacy Policy applies to EastmarkHK CRM (bundle ID com.eastmarkhk.eastmarkhkcrm) for macOS (iOS, iPadOS and Android planned). EastmarkHK CRM is a professional CRM for managing business clients, contacts, sales opportunities (pipeline), tasks / follow-ups and a shared activity timeline, with an optional invoicing module that creates quotes and invoices in the companion app EastmarkHK e-Invoicing.

This document describes the data stored, the purposes for which it is used, the network connections made and the system permissions required, as expected by Apple for App Store and Mac App Store submission (Privacy Nutrition Labels and PrivacyInfo.xcprivacy).

By default, EastmarkHK CRM stores all user-entered business data on the device in a local SQLite database. EastmarkHK does not operate a mandatory cloud account for this app. Optional features (team sync on a server you host, the e-Invoicing module, the on-device AI assistant) are user-configured and only contact services the user chooses.

2. Data Stored by EastmarkHK CRM

Data Type	Storage	Shared With	Purpose
Clients (name, VAT / Peppol ID, address, tags, notes)	SQLite (on-device)	Nobody by default	Business client register
Contacts (name, email, phone, role, messaging channels)	SQLite (on-device)	Nobody by default	People at each client
Opportunities (pipeline stage, amount, probability, notes)	SQLite (on-device)	Nobody by default	Sales pipeline tracking
Activity timeline (notes, calls, e-mails, meetings, linked quotes / invoices)	SQLite (on-device)	Nobody by default	Full history per client and per deal
Tasks and follow-up reminders	SQLite (on-device)	Team members, only if you enable sync	Reminders and relances
Local team accounts (username, display name, role)	SQLite (on-device)	Team members, only if you enable sync	Assign tasks and attribute activity by rep
App lock password / biometrics flag	Secure storage (Keychain)	Nobody	Optional device unlock (Face ID / Touch ID)
Team sync credentials (your own server)	Secure storage (on-device)	Only the host you configure	Multi-device / multi-rep synchronisation
e-Invoicing connection credentials (optional module)	Secure storage (on-device)	Only the e-Invoicing host you configure	Create quotes / invoices from the CRM
Product photos (optional invoicing module)	Local files / shared container	Nobody by default	Catalogue used on quotes and invoices

EastmarkHK does not automatically receive your CRM database. Team sync, when enabled, uses credentials you enter and exchanges data only with a server you control (your own hosting, running the EastmarkHK CRM sync endpoint).

3. Network Connections

Endpoint	Purpose	Triggered By	Data Sent
Your own CRM sync server (optional)	Keep clients / contacts / opportunities / activities / tasks in sync across devices or reps	You enable Team Sync in Settings; automatic pull, debounced push after local changes	The CRM records above, to the host you configure
EastmarkHK e-Invoicing (optional module)	Create / read quotes and invoices for a client	You create a quote / invoice, or open a client's invoicing section	Local: shared on-device database only. Remote mode: client + document data to the e-Invoicing host you configured in that app
Apple Foundation Models (on-device, Apple Silicon, macOS 26+)	AI-assisted opportunity draft (title / notes from your text)	You use the AI assistant when creating an opportunity	Processed entirely on-device; nothing is sent to EastmarkHK or Apple
Apple App Store (StoreKit)	Optional subscription purchase (invoicing module)	You purchase / restore a module subscription	Handled entirely by Apple; EastmarkHK never sees payment details

Client and pipeline management work fully offline. Network use is limited to features the user enables or explicitly triggers — there is no background telemetry.

4. System Permissions Required

Permission	macOS	Reason
Microphone + Speech Recognition	Optional (dictation)	Voice-to-text for notes, opportunities and tasks — transcription happens on-device
File picker (Photos / Documents)	User-selected files only	Import product photos and CSV backups; export data the user requests
Face ID / Touch ID (local authentication)	Optional app lock	Unlock the app when app lock is enabled
Network client	When optional features used	Team sync, e-Invoicing module, App Store purchase validation
Local database & secure storage	Automatic	App data and credentials on device
Camera	Not used	Not requested — photos are chosen via the file picker, not captured
Location (GPS)	Not used	Not requested
Contacts book (system)	Not used	Not requested — clients and contacts are entered in-app

5. PrivacyInfo.xcprivacy - Required Reason APIs

API Category	Reason Code	Usage
NSPrivacyAccessedAPICategoryUserDefaults	CA92.1	Read / write locale and on-device preferences via SharedPreferences
NSPrivacyAccessedAPICategoryFileTimestamp	C617.1	Read file modification dates when managing local app files

NSPrivacyTracking is set to false. No advertising identifier APIs are used.

6. App Store Privacy Nutrition Labels

Category	Collected?	Linked to Identity?	Used for Tracking?
Contact Info	Yes (clients / contacts you enter)	No	No
Financial Info	Yes (deal amounts, linked invoice totals)	No	No
Photos or Videos	Yes (product photos, optional)	No	No
Other User Content	Yes (notes, timeline entries)	No	No
Identifiers	No (no advertising ID)	-	-
Location	No	-	-
Browsing History	No	-	-
Usage Data	No	-	-
Diagnostics	No	-	-

Data marked "Collected" is entered by the user for business use and stored on the device (and, if Team Sync is enabled, on the server the user hosts). It is not linked to the user's Apple ID or a EastmarkHK cloud account.

7. Data Retention and Deletion

Data	Retention	How to Delete
CRM database (clients, opportunities, activities, tasks)	Until deleted in app or app removed	Delete records in app, or uninstall
Product photos	Until deleted or app removed	Remove in app, or uninstall
Sync / e-Invoicing credentials	Until cleared in Settings or app removed	Clear fields in Settings, or uninstall
Team sync server copy (optional)	Controlled by the user's hosting	Delete records on the user's sync server

Uninstalling the app permanently deletes the on-device SQLite database. Copies already synced to a server you configured remain until you delete them there.

8. Third-Party Services

Service	Provider	Purpose	Data Sent	Privacy Policy
CRM sync server	User's own host	Optional multi-device / team sync	CRM records (user-enabled)	User's host policy
EastmarkHK e-Invoicing	EastmarkHK (sibling app)	Optional invoicing module (quotes / invoices)	Client + document data (module purchased and used)	EastmarkHK e-Invoicing Privacy Report
Apple StoreKit	Apple	Subscription purchase for the invoicing module	Handled by Apple; no data shared with EastmarkHK	apple.com/privacy
Apple Foundation Models	Apple (on-device)	AI-assisted opportunity drafting	On-device only	apple.com/privacy

No analytics SDKs, advertising networks or third-party tracking libraries are included in EastmarkHK CRM.

9. Children's Privacy

EastmarkHK CRM is a professional B2B CRM tool. It is not directed at children under 13 (or under 16 in the European Union). We do not knowingly collect any data from children.

10. No Mandatory Cloud Login

EastmarkHK CRM does not require an EastmarkHK cloud account. Optional app lock uses a password or biometrics stored on the device. Optional Team Sync uses the server credentials you provide for your own host.

11. Contact

For any privacy-related question or request regarding EastmarkHK CRM, please contact:
